

ECogs 2020

International Conference on Embodied Cognitive Science

What is the relationship between life and mind? What is the influence of behavior on the brain? How is human consciousness shaped by our interaction with the sociocultural environment, with language and technology? It is time for a Copernican revolution in cognitive science: for too long has it been assumed that the brain is the stationary center of a person's cognitive universe.

This conference will bring together approaches that are theoretically and methodologically diverse yet united in their commitment to an alternative orientation, one in which embodied interaction plays the primary organizing role of life, mind, and consciousness. The aim is to facilitate the development of this alternative orientation in both conceptual and experimental terms.

Keynote Speakers

Barrett, Louise
 Beer, Randall
 Clark, Andy
 Ikegami, Takashi
 Lenay, Charles
 O'Regan, Kevin
 Petitmengin, Claire
 Pfeifer, Rolf

Invited Speakers

Auvray, Malika
 Bullock, Seth
 Egbert, Matthew
 Heras-Escribano, Manuel
 Iizuka, Hiroyuki
 Kyselo, Miriam
 Lobo, Lorena
 Reiter, Sam
 Stapleton, Mog
 Taguchi, Shigeru
 Tani, Jun
 Torrance, Steve

■ Conference Chair ■

Tom Froese,
 Embodied Cognitive Science Unit
