

# Seminar: Under pressure. Or, 101 uses for diamond (outside of bling) by Dr. Joe Welch

Joe will briefly introduce University College London, UCL's historic links with Japan, and the research capabilities and collaboration opportunities available to you at the London Centre for Nanotechnology.

The bulk of the talk will cover the fascinating range of diamond research underway in the diamond electronics group at UCL; from sensing in extreme environments through to 1-dimensional physics and neuroscience.

Due to the breadth of topics to be covered, this will be a talk aimed at a general scientific audience, although there will be time set aside towards the end for more focused discussions. We will have several diamond specialists in the audience who will be able to suggest the potential benefits of utilising diamond's superlative properties in your own research.

Hope to see you there!
