Math & Board Game Evening: Play & Connect

Space Outside
L4E48

16:30-18:30

START

Hi everyone,

Are you interested in math education, school outreach, or just looking for a fun break between lectures? You are warmly invited to an informal social gathering centered on Math Outreach and Board Games, hosted by visiting scientist Professor Federica Dragoni (Cardiff University).

This is a casual space for PhD students, young researchers, and senior staff to hang out, talk about innovative teaching approaches, and—most importantly—play some games!

What to expect:

The Games:

We will have a curated mix of popular commercial board games alongside custom mathematical games designed by students.

The Goal:

Play, test things out, and get inspired by how games can be used as serious tools to share mathematics with schools and the public.

The Vibe:

Completely informal. Grab a drink/snack, join a table, and chat freely with peers and faculty.

Whether you want to brainstorm your next outreach project or just want to roll some dice and talk math, we hope to see you there!
