Workshop on Cognitive Neurorobotics
March 5th, 2026, OIST

A Consideration of Robot Foundation Models as Embodied Intelligence

Tetsuya Ogata

- Director, Institute for AI and Robotics, Waseda University, Japan
- Joint-Appointed Fellow, Artificial Intelligence Research Center (AIRC), AIST, Japan
- Visiting Professor, Research and Development Center for Large Language Models, NII, Japan

Waseda University

Reinforcement Learning: Whole Body Control

- Simulation learning is possible
- Inexpensive QDD Motors
- Considerably higher level of perfection

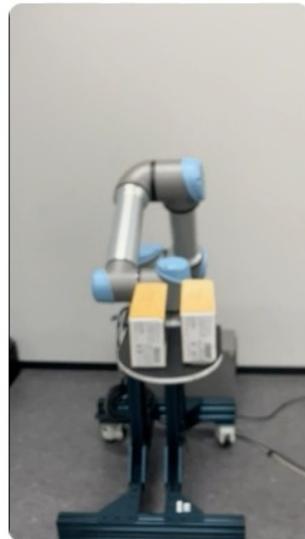

Unitree G1 Kungfu Kid V6.0, 2025年10月13日

Prof. Atsuo Takanishi

Remained Problems

- Is language the foundation?
  - Integration with real-world experiences (symbol grounding problem)

- Large-scale models + fine-tuning?
  - Necessity of continuous learning (developmental robotics)

- Are large-scale models sufficient for perfection?
  - The need for real-time inference (active inference)

The 8th Joint IEEE International Conference on Development and Learning and on Epigenetic Robotics 2018

Status

Outward-door
1. Approach
2. Opening
3. Passage

Inward-door
4. Approach
5. Opening
6. Passage

The prediction errors between the near-future situation predicted by the six motion generation modules and the robot's camera image are calculated in real-time, and the smallest one is used for motion generation.

AIRoA (AI Robot Association)

On March 27, 2025, a press conference was held to establish AIRoA.
It has been featured in various media.

- **参加メディア (一部)**：NHK / テレビ東京 / 読売新聞社 / 朝日新聞社 / 日本経済新聞社 / 日本経済新聞社 /科学新聞社/電波新聞社/日本物流新聞社/日刊建設通信新聞社/日刊自動車新聞社/ライノス・パブリケーションズ/リックテレコム/日本流通産業新聞社/日経BP/アイティメディア株式会社/インプレス

20B JPY (approx. 130M USD) supported by NEDO (METI) in August 2025

Robot PF| Create a Scalable/Data Driven Robot Learning Ecosystem

Implementation by Companies

Social Implementation

Manufacturing | transportation | cleaning | Food Service | Caregiving | Healthcare

⑤ **Integrate foundation models and implement them in society**

Individual Models

Foundation model Developer A | Foundation Model Developer B | Foundation Model Developer C

④ **Learn individual models based on base foundation models**

⑥ **Feed back and accumulate data generated**

Implementation by AIRoA

Base Model

Base foundation model v1.0 ...

② **Develop base foundation models using data in the data infrastructure**

⑦ **Use newly created data to further improve the performance of foundation models**

Expansion of quantity, variety and quality

Data Infrastructure

① **Collect overwhelmingly insufficient data in the field of robot**

③ **Collect data and update models by verifying learned base models on test robots**

Hardware

Robots for Testing

·Standard machines such as TMC, Hitachi, PFR, etc.
·Other Robots

⑧ **Add the standard machines**

Fundamentals and Core Technologies for Embodied AI

[Embodied AI Systems]
Research Supervisor:
Tetsuya Ogata

April 2025
Tetsuya Ogata
Professor, Waseda University
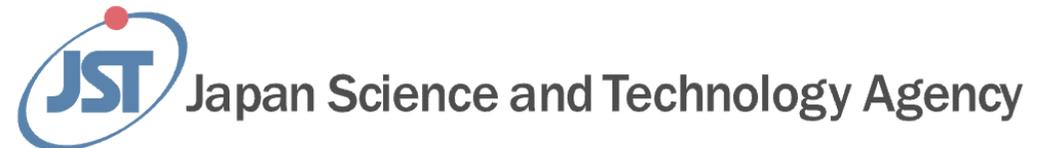

Research Fund and Duration

2025 year proposal

- **Research period: 5.5 years (from October 2025 to the end of March 2031)**

- **A total of approximately 15 proposals will be adopted, including those for 2026 and 2027.**

- **Budget size of each proposal (upper limit): Total 300M JPY (approx. 2M USD) (excluding indirect expenses)**

 # The amount of the application may be adjusted by scrutiny, etc.

Ogata CREST (2025-)

Solving future social issues

Labor shortages in services, manufacturing, transportation, etc. due to the extremely low birthrate and aging population, nursing care, livestock farming, agriculture, polar exploration, etc.

Intelligent systems that flexibly respond to real-world environments

(1) Development of AI models that can flexibly adapt to real environments

Robotic foundational models, End-to-End models, World models, Imitation learning, Reinforcement learning, Uncertainty handling, Active inference, Transfer learning, Continual learning, Long-term motion generation, Cognitive developmental robotics, Symbol emergence robotics, Agent cooperation, AI model security and risk analysis, etc.
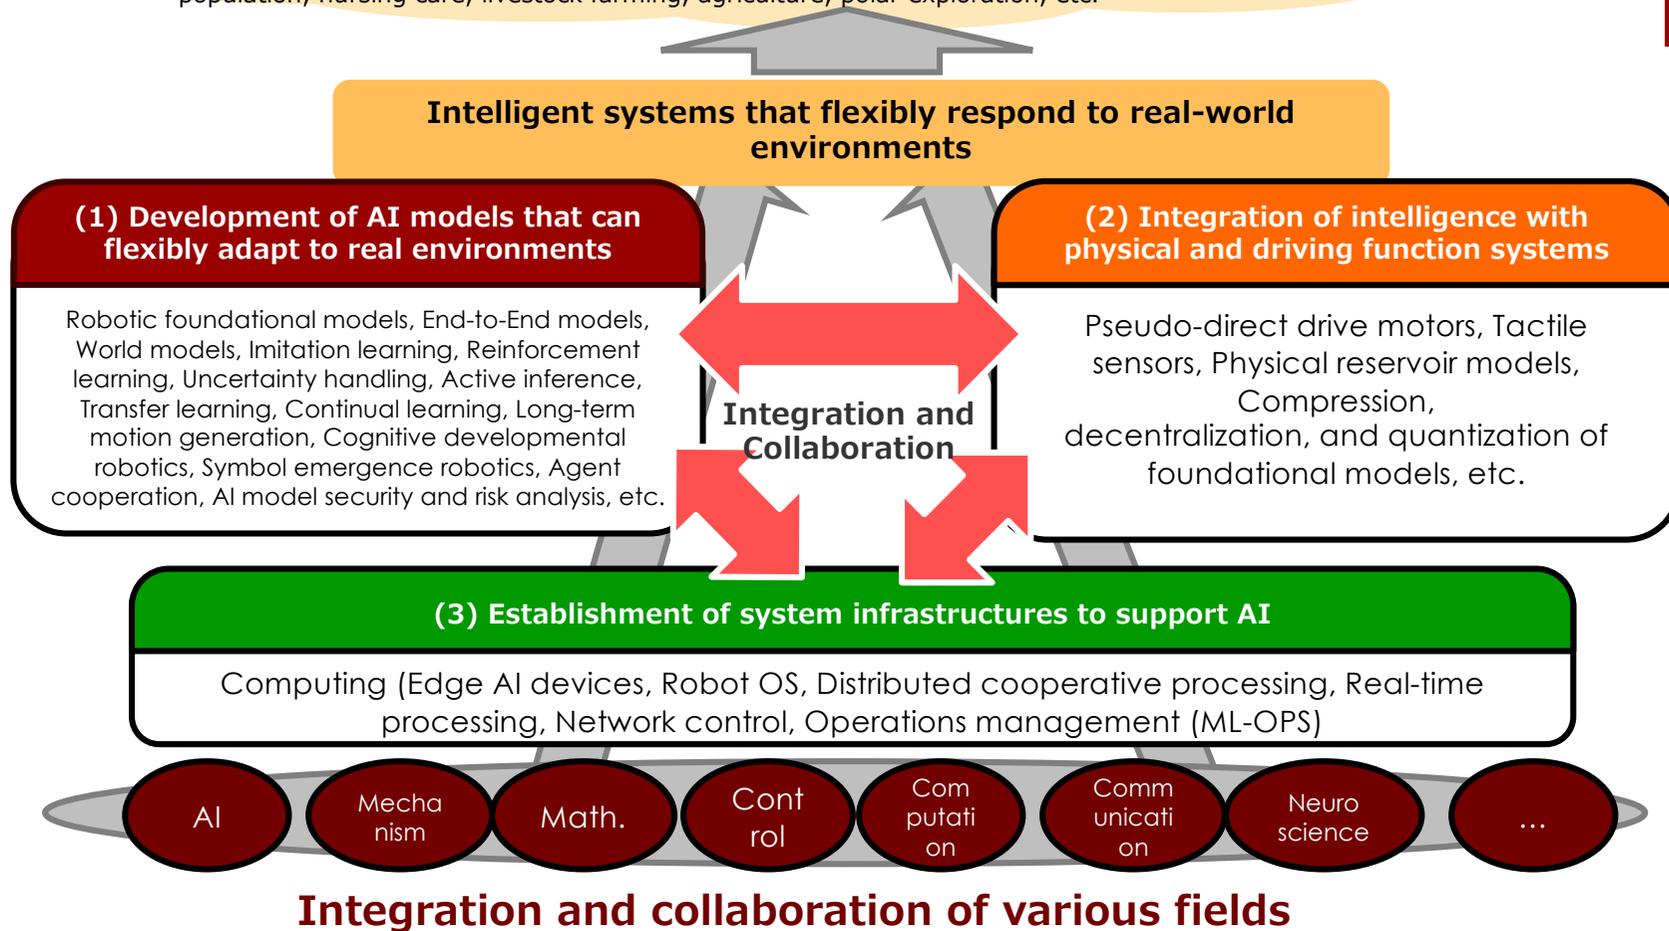

Integration and Collaboration

(2) Integration of intelligence with physical and driving function systems

Pseudo-direct drive motors, Tactile sensors, Physical reservoir models, Compression, decentralization, and quantization of foundational models, etc.

(3) Establishment of system infrastructures to support AI

Computing (Edge AI devices, Robot OS, Distributed cooperative processing, Real-time processing, Network control, Operations management (ML-OPS)

| AI | Mechanism | Math. | Control | Computation | Communication | Neuroscience | ... |

Integration and collaboration of various fields
