

# Responsible AI at Microsoft

Lee Hickin  
AI Technology and Policy Lead  
Microsoft Asia

June 2024

# We cannot realize the value of AI without **trust**

**73%**

of people feel concerned about  
the potential risks of AI

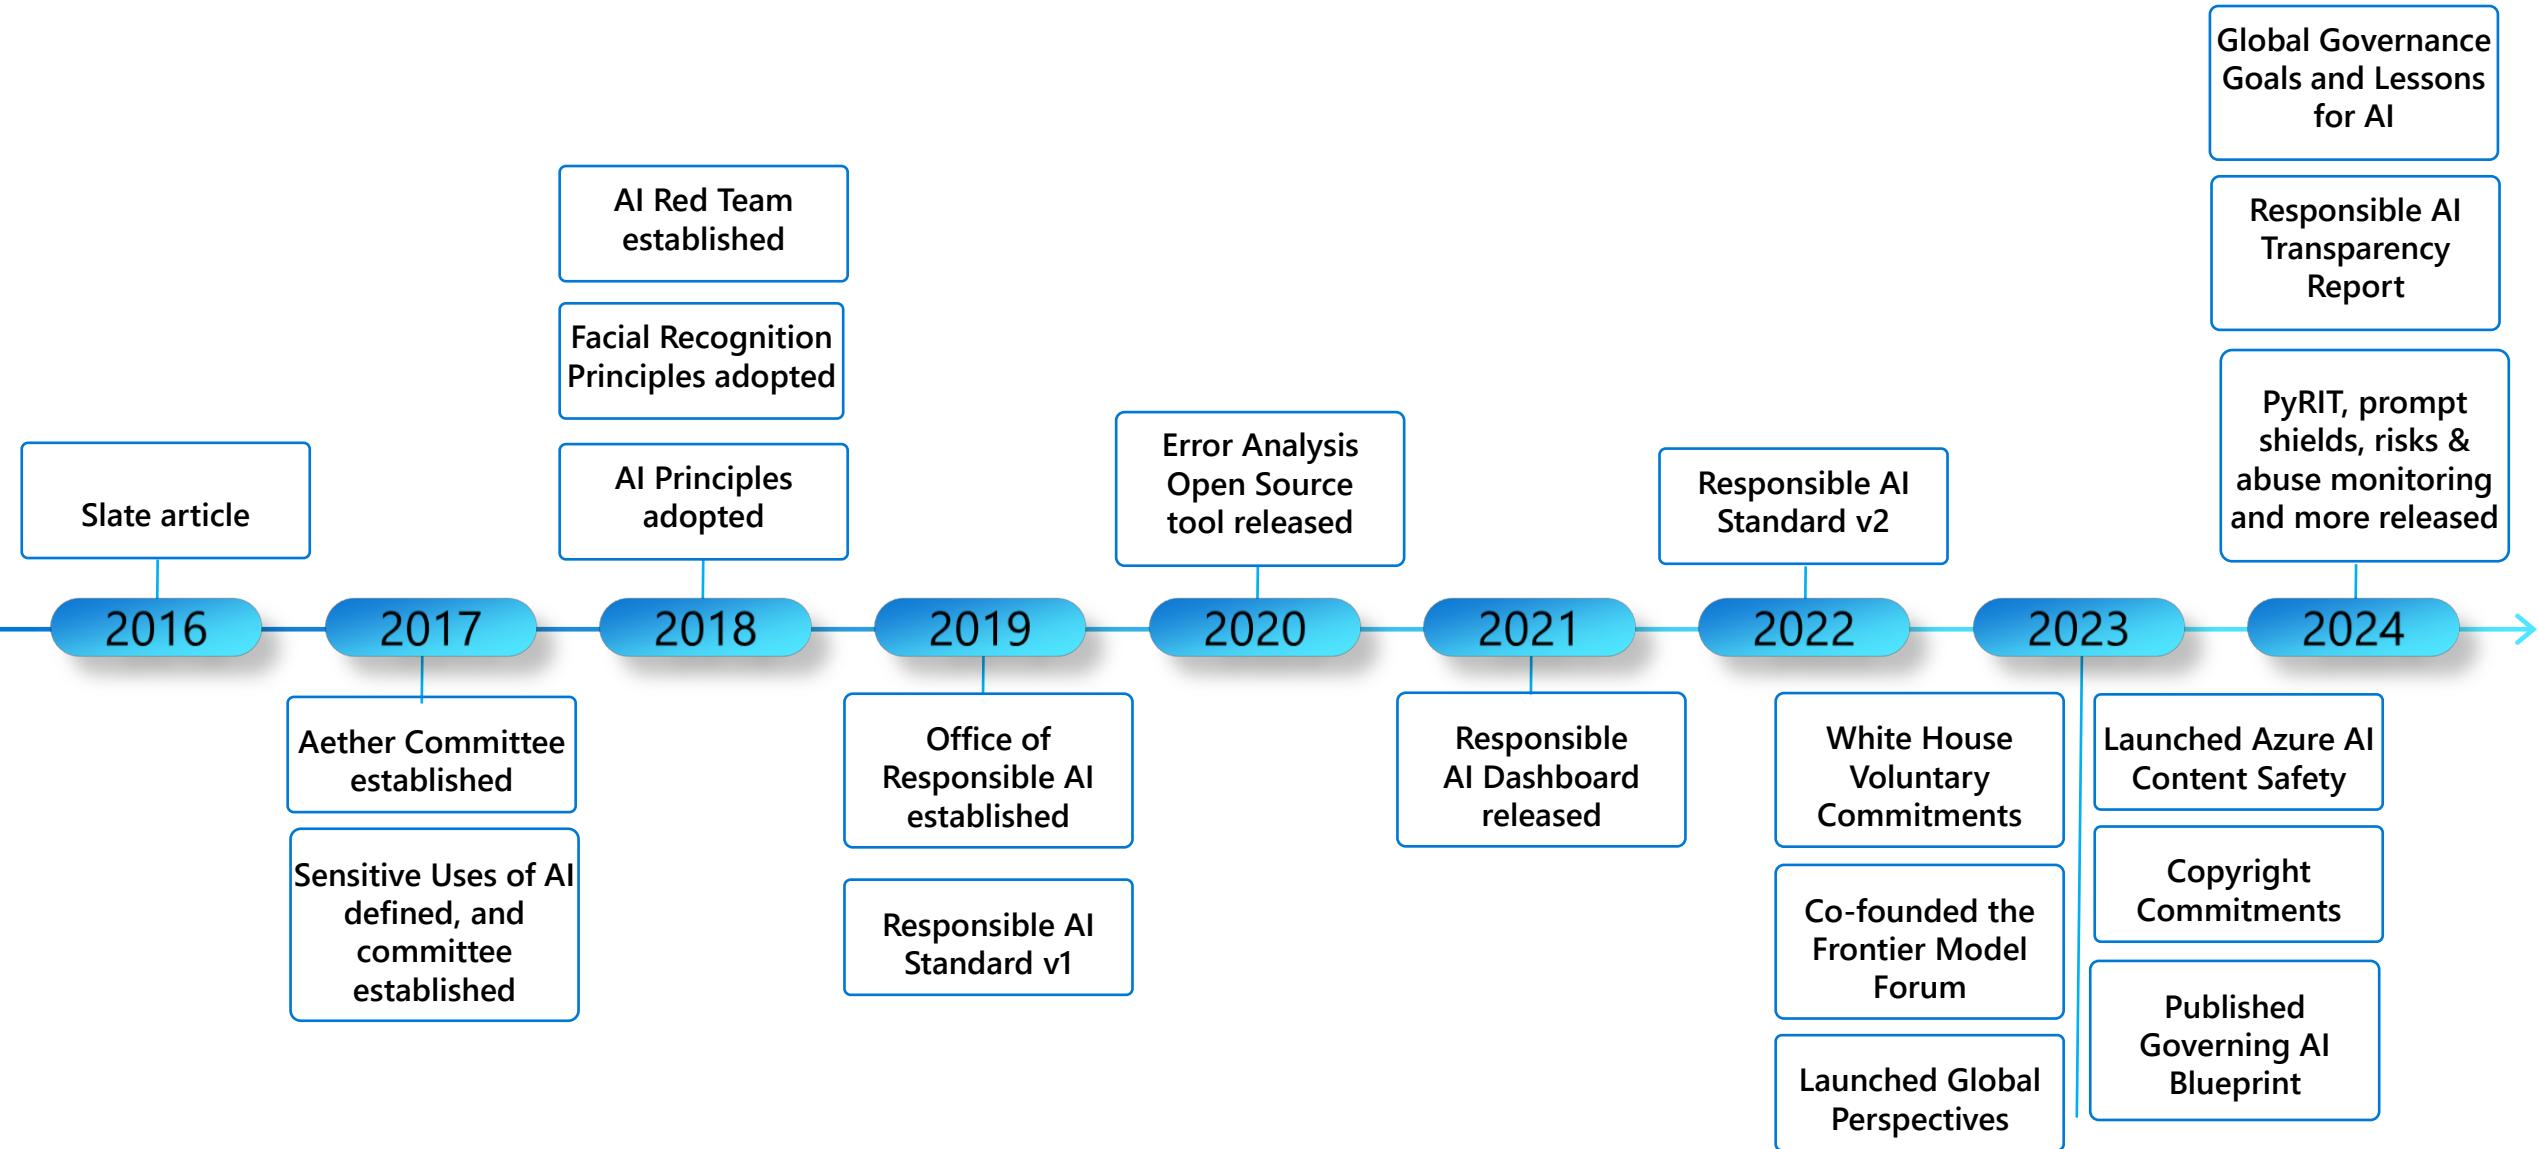

**75%**

would be more willing to trust AI  
with assurance mechanisms for  
ethical and responsible use

# International AI governance **outcomes**

## Globally significant risk governance

International collaboration to monitor for and respond to globally significant **safety and security risks**

## Regulatory interoperability

International framework to facilitate and strengthen the **interoperability of domestic policies and regulation**

## Inclusive progress

International network to broaden **access to infrastructure and skilling** for inclusive AI research & development and technology benefits

# Ongoing actions and proposed next steps

## Globally significant risk governance

1

**Develop safety/security standards** via global network of AISIs/partners

2

**Require notification** of highly capable AI model development and advance international agreement for G2G information sharing

3

**License compute providers** to verify infrastructure security and developer use of standards

## Regulatory interoperability

1

**Define** global principles, policy frameworks, and codes of conduct

2

**Support consistent implementation** of common standards and expectations for artifacts

3

**Establish a process** to facilitate ongoing collaboration and iterative improvements

## Inclusive progress

1

**Invest in greater access** to infrastructure and models

2

**Enhance AI skills** by strengthening and amplifying available resources

3

Promote and facilitate **AI for good**
