10:00-11:00

_{講演者}: Vance P. Lemmon 教 授

Walter G. Ross Distinguished Chair in Developmental Neuroscience Department of Neurological Surgery The University of Miami

演題: Functional Genomics: Phenotypic Screening to Identify Genes and Compounds that Promote Nerve Regeneration

場 所: 京都大学 アイセムス本館 2 階(東一条北西角) セミナーホール (A207)

Development and regeneration of the nervous system requires the regulated formation of axons and dendrites. A comprehensive understanding of neuronal process development on a molecular level is lacking. High Content Analysis (HCA) of primary neurons offers a powerful way to study how different genes and compounds influence neuronal differentiation. Four screens will be described, including in vivo experiments that validate the hits in promoting axon regeneration.

主 催:京都大学 物質-細胞統合システム拠点 (iCeMS=アイセムス)

京都大学 再生医科学研究所 楠見研究室

共 催:京都大学医学研究科グローバルCOE プログラム「生命原理の解明を基とする医学研究教育拠点」
